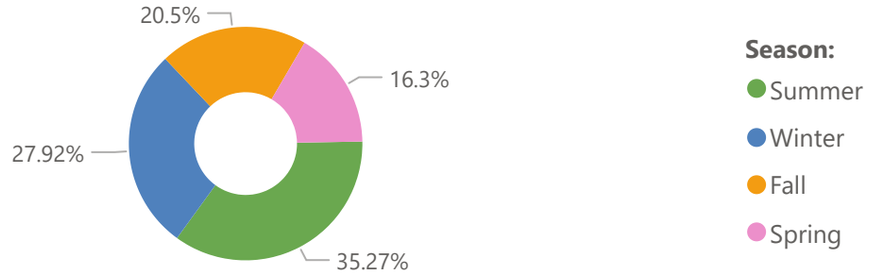
Service Requests by Season



Street Light Condition complaints exhibit the highest delay rate (56.77%), indicating infrastructure maintenance challenges. Queens shows the longest average resolution time, suggesting higher service backlog compared to other boroughs. Agency-level analysis indicates that operational workload varies significantly across departments, highlighting the need for better workload distribution.

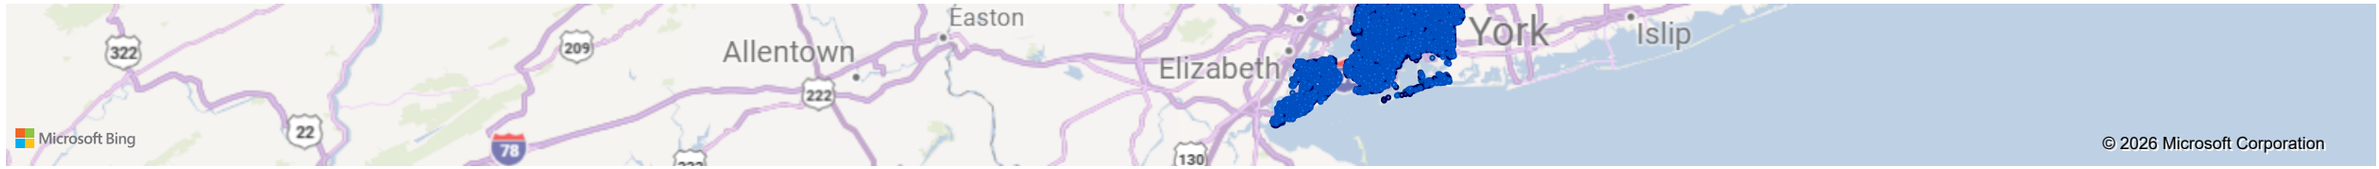
Geographic Distribution of NYC 311 Complaints

Problem Type: Sewer Street Light Condition Water System



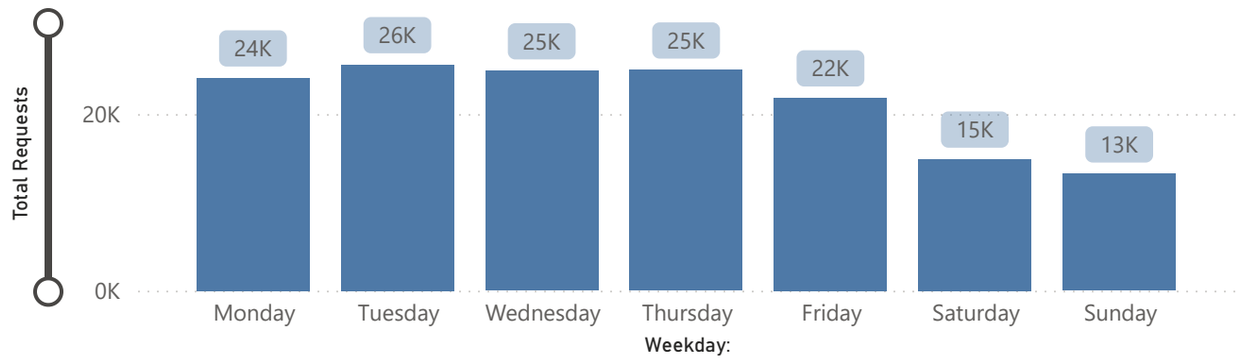
Service Request Volume by Borough

Borough: QUEENS BROOKLYN BRONX MANHATTAN STATEN ISLAND

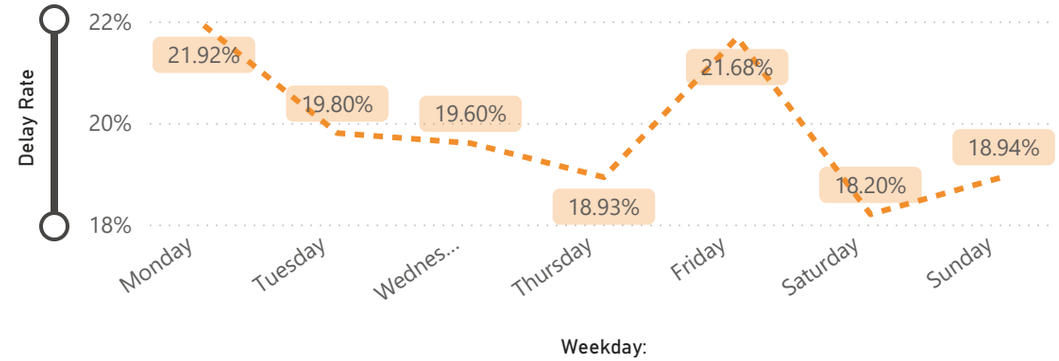
Queens and Brooklyn account for the largest share of NYC 311 service requests, reflecting higher population density and infrastructure demand in these boroughs. Complaint clusters are concentrated in central urban areas, indicating that service resources should be strategically allocated to high-demand locations to reduce response times.

NYC 311 SERVICE PERFORMANCE ANALYSIS

Total Service Requests by Weekday



Average Delay Rate by Weekday



Average Complaint Resolution Time by Weekday

Service requests are highest during weekdays, peaking on Tuesday and Wednesday, while weekend activity declines significantly. Delay rates increase on Mondays and Fridays, likely due to backlog accumulation at the beginning and end of the workweek. Resolution times are longest on Fridays, suggesting higher operational pressure before weekends.
